SUMMARY

Frontend Engineer with 4+ years leading React UI/UX and performance work for a data-driven SaaS platform — architecture rebuilds, a design system built from scratch, and integrations shipped under hard deadlines. 20+ years total across web development, interactive software, and design.

WORK EXPERIENCE

Speedeon Data *Frontend Engineer* — Jul 2022 – Aug 2026

- Owned end-to-end frontend development of AudienceMaker, Speedeon's core data-audience platform, evolving its UI/UX and architecture over 4+ years.
- Led a full legacy-to-functional-components React refactor across the platform, including its most complex chart widgets, shipped incrementally alongside ongoing feature work.
- Designed and built a getcensus.com UI, a custom data-destination integration, from scratch after a third-party solution fell through — delivered on the original deadline.
- Reduced Explorer page-load API calls from 10+ to 3 and cut re-render cycles from 21 to 3, meaningfully improving platform responsiveness.
- Initiated Speedeon's first UI/UX design system in Figma, establishing shared components and design tokens adopted platform-wide.
- Built configurable match-level selection, data-integrity alerting, and admin configuration tooling used across the order and audience-building workflow.
- Created and managed the company's WordPress support knowledge base and corporate site; partnered with Marketing leadership on a Salesforce-to-HubSpot migration and email/campaign automation.
- Independently designed and built two CCPA data opt-out sites (Node.js/React) under compliance deadlines — one for a major enterprise client, one for Speedeon's own site.

Medicom Health *Senior Interactive Designer & Marketing Technologist* — Jan 2001 – Jul 2022

- Designed and developed custom desktop software applications with rich user interfaces for major pharmaceutical and health organizations, writing 2D/3D animation and interaction code in Flash/Flex and translating it to C/C++, .NET, and Java for hand-held and device-specific companion applications.
- Developed/maintained corporate websites aligned with marketing goals (WordPress, PHP, MySQL, custom plugin development).
- Created digital and print marketing materials, motion graphics, and video.
- Supported lead-generation and reporting strategy using Pardot, Salesforce, and other tools in the corporate martech stack.

ADC Telecommunications *Interactive Programmer & CG Specialist* — Jul 1996 – Jan 2001

- Self-initiated a Flash/actionScript-based interactive 3D product navigator, converting raw engineering files into isometric vector graphics that let users drill from a facility-level map view down to individual product detail, complete with animated signal-flow examples — it became a core piece of the global corporate site with deep links from site product pages to specific app locations, and led to managing a small team of 4 continuing the work.

SKILLS

Frontend: React, Vue, JavaScript, TypeScript, React Hooks, Context API, Git/GitHub, HTML/CSS, Responsive Design, Performance Optimization

Design & Systems: Adobe/Figma, Design Systems, UI/UX

Platform & Data: PostgreSQL/MySQL, REST/API Integration

Marketing Systems: HubSpot, Salesforce, Pardot, Campaign Automation

EDUCATION

Udemy Full Stack Developer (Java, SpringBoot, PostgreSQL, JS, CSS) | 2024
Zero To Mastery Academy Complete React Developer (Redux, Hooks, GraphQL) | 2022
Hennepin Technical College Associate of Applied Science (AAS) in Graphic Design
